CONTENTS

It's a great privilege to be part of your digital banking evaluation process!

At Kony DBX, we are committed to staying ahead of the curve and remaining at the forefront of digital innovation. This commitment will not change. We believe it is our responsibility to help equip and prepare financial institutions for digital transformation by sharing emerging trends and practical advice that helps leaders make the best decisions for their customers, members, and staff.

The Battle for Your Customers and Members has Intensified

Consumer loyalty isn't dead, but banks and credit unions need to fight harder than ever to retain their customers. New players are courting them at every turn – but local banks and credit unions still have a (quickly disappearing) competitive advantage: personal relationships with customers and their communities. If given a choice, consumers still prefer to work with their neighborhood institutions as long as they have efficient, anytime access through digital banking channels.

Kony DBX has discovered a way to pair the digital banking of regional and mid-sized organizations with their un-harnessed power of personalized in-house service. I believe 2019 will be the year of “now or never” to launch this initiative, if you haven't already begun.

Where is the Sweet Spot Between Technology and Personalized Service?

Finding a solution that meshed ‘humanized’ service and digital delivery led Kony, Inc. to acquire Pivotal, the innovation division of Umpqua Bank. Pivotal – now known as Kony DBX Engage – allows customers and members to interact with

their own banker from their local bank or credit union through an app. The beauty of Kony DBX Engage is that customers can choose the personal banker they want to work with by viewing each of their background, interests, areas of expertise, community involvement, charitable causes, etc. Customers have a humanized experience, not an experience of a bot that has no interest in them, often missing the nuances of real conversation. There are also all the possibilities that come in terms of cross selling and creating amazing experiences. When was the last time you had a great experience with an IVR?

Summing it All Up

Significant changes are ahead in digital banking, but one thing is certain: digital banking will forever hold equal footing with crucial banking divisions such as security, compliance, financial systems, customer satisfaction, and others.

Compete effectively in the years ahead. Don't simply outspend your competition; outsmart and out-partner them by teaming up with a proven leader that knows exactly how to pave the way for digital transformation.

Sincerely,

Jeffery Kendall
SVP, GM, Kony DBX

We believe integrity is the fabric of partnership.

Our Story

Kony DBX was built from the ground up to level the “big bank” playing field.

With modern, frictionless applications powered by the industry’s leading platform, Kony DBX enables banks and credit unions of any size to accelerate innovation – without compromising what’s critical.

Our clients view Kony as a trusted partner and rely on us to deliver the people, process and technology to own their roadmap, set the pace of change and get to market faster.

Kony DBX works globally with banks and credit unions of all sizes, spanning from \$350 million in assets to over \$900 billion in assets. The highest concentration of our customers are in the \$3-\$30B AUM range.

Let us introduce ourselves.

While nearly 70% of Kony's customer and revenues come from Digital Banking, Kony also provides Kony Quantum, the top rated application development platform for non-banking industries. Kony's customers outside of banking include many of the leading retail, healthcare, travel, and entertainment companies who utilize Kony to create cutting edge consumer and employee applications.

Kony has over 400 full time persons in R&D, which is larger than the sum total of employees at most of our competitors. Approximately 25 - 30% of Kony's operating budget is allocated for R&D and innovation. We don't buy existing technology and figure out how to stitch it together, we build new technologies to serve the needs of our credit union customers and their members. Kony's R&D program includes innovations and enhancements to existing products as

well as a dedicated research team working on future technologies.

Examples of current R&D activities include:

- Enhanced Security
- AI Chatbots
- Blockchain
- Kony DBX Business Banking
- Kony DBX Consumer Lending
- Kony DBX Engage
- Augmented Reality
- Virtual Accounts
- Voice and video integration
- MicroApps for various business needs

Kony DBX Difference

What makes us different in the market also differentiates our customers in the markets they serve.

Kony DBX Differentiators

Our Services

Kony also provides a wide range of products and services to support the needs of our customers. Customers have access to both Kony Professional Services (KPS) and third party services organizations to support their training and development efforts. KPS offers a range of services options from prepackaged training, UX, or implementation/development support offerings as well as custom options.

Professional Services

- Design Support (style guide, brand, etc.)
- App design and enhancements
- Staff augmentation to support in-house design or development teams
- Turn-key app as a service

Digital Strategy Services

- Roadmap Workshops
- Governance

- Persona Development
- Customer Journey Mapping
- App Store Rating and Reviews

Consulting Services

- User Testing
 - Heuristic Audits
 - Backlog Prioritization
 - Roadmap Execution
 - Digital Transformation
- Digital Ecosystem

Content Management

There are several places in the end user retail banking applications where static content can be fetched from the Customer 360 app instead of being hard-coded into the application. There are two primary benefits of doing this:

- The application does not have to be deployed again, in case any of this content

has to be updated. Update in Terms and Conditions is a classic example for this scenario.

- The content does not have to be packaged with the application, reducing the application size

The CMS feature can be used to manage password policies, privacy policies, T&Cs, FAQs, service outage messages, locations, and customer care information.

If your requirements are more robust Kony would be happy to partner with any vendor that you might have in mind through API connections. (example: Drupal or Episerver)

Hosting

Kony DBX offers flexible deployment models to fit the needs of your business, including public cloud, managed cloud services (VPC and dedicated managed hardware), and on-premise. All options enable an enterprise-grade environment with geo-redundant high availability. For on-premise deployments, the service team provides complete documentation covering topics related to hardware and software configuration. Additionally, the services team can provide both on-site and remote services to ensure the optimal configuration of all internal resources for development, testing and deployment.

Security, Controls and Compliance

We take security, controls and compliance seriously. Kony does not store customer

data. A digital banking application opens up many vectors of attack of an institutions infrastructure and opportunities for fraudulent activities. The Kony DBX platform provides unique protections across the full suite of applications to help prevent and respond to all OWASP Top Ten identified threats and more.

At the network layer, these protections include monitors and tools like TWO-Way SSL, Certificate/Key pinning, whitelist/blacklist, and TLS 1.2 with AES 256 encryption to thwart attacks like man-in-the-middle. We also monitor our cloud infrastructure 24 hours 7 days a week and partner with AWS for DDOS and malware detection.

same

Kony's protections go beyond many vendors, because we build applications that are designed to run on insecure devices. Our unique binary hardening that include among many others tapper resistance, Whitebox Cryptography, jail breaking/

rooting detection, and even automatic shutdown and deinstall under certain circumstances. Outside of just digital attacks, we recognize that fraud detection and mitigation is a high priority among financial institutions.

To assist with Fraud detection, we have OFAC lists check upon registration, IP range blocking, and provide integration points into real-time monitor and detection provider like RSA, Idology, and ThreatMetrix.

Global, industry-wide certifications & compliances

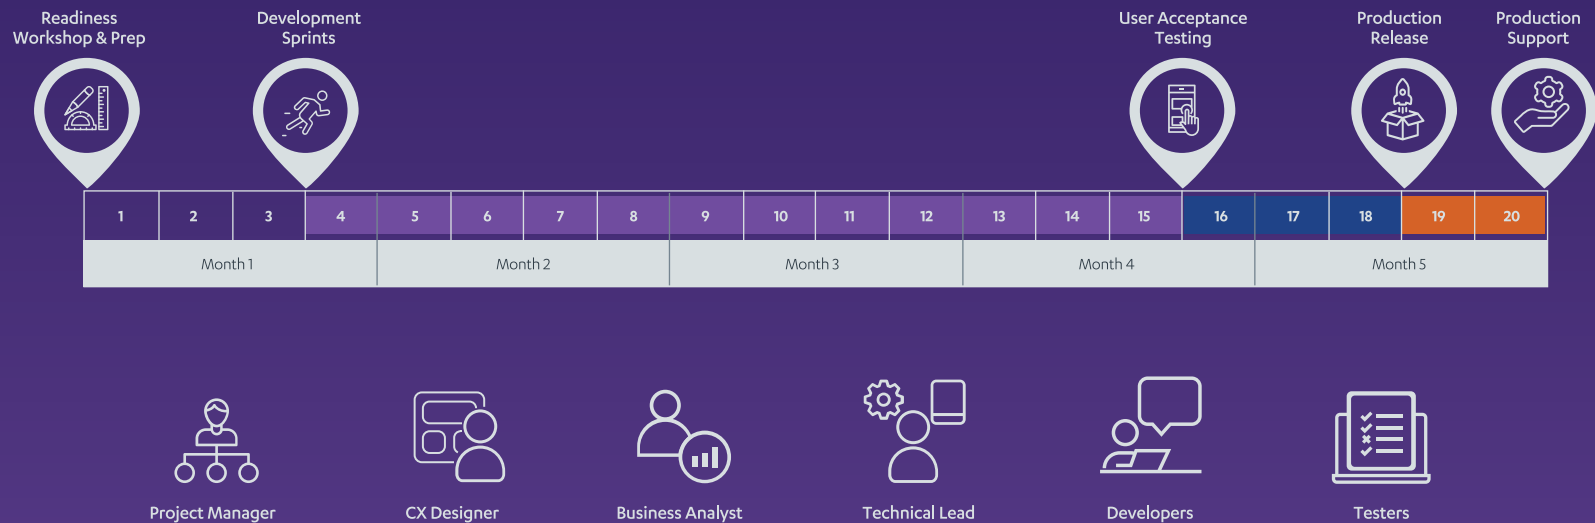

Global, industry-wide certifications and compliances are in some cases a requirement by law as well as a requirement to do business.

Delivery

We deliver a best-in-class application in 20 weeks with a deeply talented team.

Introducing Ready to Launch

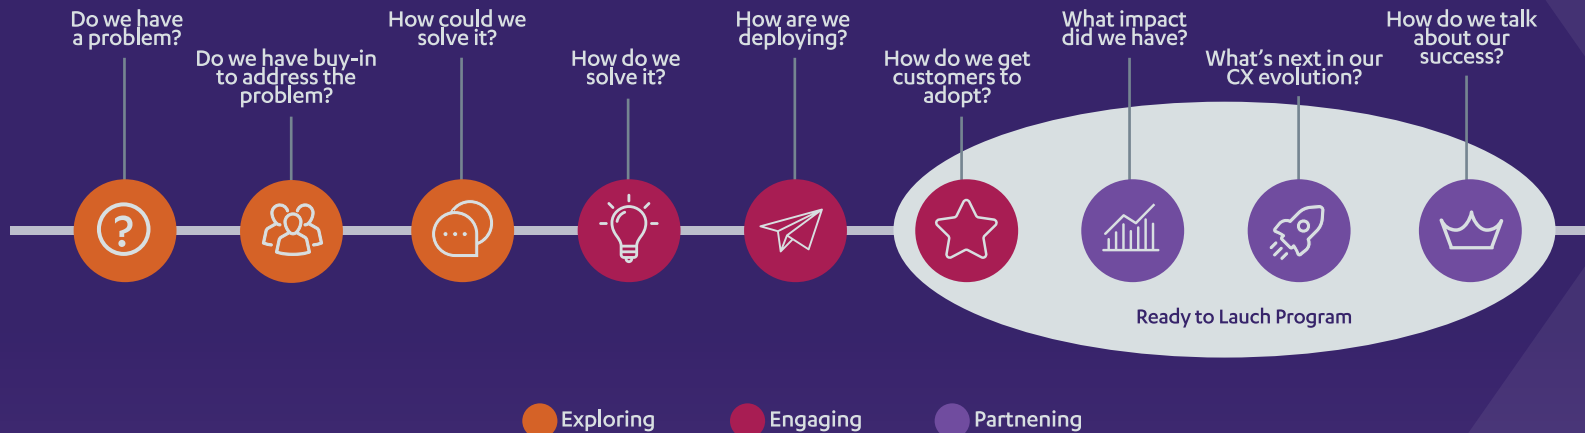

Kony is a trusted digital partner for the entire journey.

Ready to Launch (R2L) is everything you need to deliver a successful digital marketing launch for current customers, new customers and employees.

The focus of R2L is making sure all the hard, preparatory work is done pre-launch and you are actively supported through the first 3 months of post-launch with strategies and materials.

The most important benefit is a strategy document and long term marketing blueprint that you can continue to execute against.

A Journey to Digital Banking Transformation

Goals and Deliverables

R2L is designed to provide everything a bank needs to effectively launch their new digital experiences for both customers and employees.

- A plan and playbook that sets you up with everything you need to make your digital banking launch a success
- A team and a tool box to support you in

developing customer/prospective customer and market engagement around your launch, to ensure that you meet your launch goals

- A solid foundation for driving return on investment from your digital banking solution
- Optional ongoing support to drive consumption of the digital banking app

Marketing Your New App

STRATEGY QUICK START:

Setting out a focused approach to Launch +90 days

Security

The Kony Digital Banking Solution is provided as a software as a service, operates as a passthrough architecture, and stores no data. Kony operates an Information Security Management System that is ISO 27001:2013 certified (renewed annually), the Kony Cloud for hosting the middleware is ISO 27001:2013 certified, PCI DSS 3.2 compliant,

and undergoes a SSAE 16 SOC 2 Type 2 audit report on an annual basis. Kony has validated and tested the client applications of the solution to meet ADA / WCAG 2.0 guidelines regarding accessibility, and provides additional features such as FIPS 140-2 Level 1 encryption capabilities in addition to using the latest TLS/SSL

encryption methods for protecting data intransit.

Kony complies with FFIEC guidelines regarding multi-factor authentication (MFA). Kony's operational policies provide consistent review that Kony's Digital Banking solutions maintain compliance with all applicable regulations.
